Education

- **International Institute of Information Technology (IIIT) Naya Raipur** — Naya Raipur, India
  B.Tech in Computer Science & Engineering (CGPA: 7.84) — *July 2024 – May 2028*

Open Source

- **GrowthBook** | *TypeScript, Node.js, REST API, React (Remote)* — Aug 2026
  - **PR #1:** Engineered and merged a public **REST API** endpoint (`POST /experiments/:id/comment`) enabling programmatic comment posting, reusing internal backend logic to ensure consistent permission checks, data models, and validation.
  - **PR #2:** Resolved a client-side **pagination bug** within the Saved Groups interface by synchronizing search filters with **pagination state**, restoring accurate data retrieval and search functionality across multi-page datasets.
- **Onyx** | *Python, GitLab API, Backend Development (Remote)* — Jul 2026
  - Designed and implemented branch-specific syncing for Onyx's **GitLab connector**, extending the backend to fetch code from a configurable branch instead of only the repository's default.
  - Refactored connector logic across GitlabConnector to thread a new **branch parameter** through two distinct **GitLab API calls** (file listing and file content fetch), preventing mismatched file states.
  - Added robust **error handling** by catching **GitlabGetError**/**GitlabHttpError** and raising descriptive **ValueError** exceptions instead of raw tracebacks.
  - Wrote and validated **regression tests** against a live GitLab repo, covering branch override, default-branch fallback, and invalid-branch paths, while maintaining full **backward compatibility** with prior default behavior.
- **Tenstorrent tt-metal** | *C/C++, Kernel Programming, System Software (Remote)* — Jun 2026
  - Merged contribution modernizing **kernel-level C/C++** type declarations across Quasar and Wormhole components; collaborated with maintainers through issue discussions and code review.

Experience

- **Backend Developer Intern** — Oct 2026 – Present
  BigBrick Technologies Private Limited — *Remote*
  - Engineered **TenderHub**, a government procurement intelligence platform using **Node.js, Express.js, and MongoDB**; designed REST APIs and 4 core data models for tender discovery, contractor profiles, AI dossiers, and persistent Copilot sessions.
  - Automated daily tender ingestion across **2 government procurement portals** using **Playwright/Puppeteer** and PDF parsing to extract bid metadata and technical specifications; integrated **Cloudflare R2** and **Redis** for document storage, caching, and rate limiting.
  - Built a **3-stage AI analysis pipeline** using **Gemini, GPT-4o mini fallback, and deterministic rules**, supporting **5 tender domains** to generate BOQ estimates, compliance checks, and contractor eligibility assessments within a **60-second analysis window**.

Projects

- **CSC Sarthi – AI-Powered Pre-Submission Assistant** | *Python, Django, Scikit-learn, OCR, Render* — [Live] | [GitHub]
  - Built an **AI-powered validation platform** for **30+ government services**, combining real-time form validation with a Scikit-learn rejection-risk model achieving **∼87% accuracy** and field-level explainability.
  - Developed an **OCR-based verification pipeline** to extract Name, ID, and DOB from documents, detecting **3+ mismatch types** through cross-validation against form inputs.
  - Implemented a **WhatsApp pre-verification chatbot** and Django analytics dashboard tracking the **top 5 rejection causes** across **30+ districts**.
- **Website Security Scanner API** | *Node.js, Vercel Serverless, REST API, DNS/TLS* — [Live] [GitHub]
  - Built a serverless **REST API** executing **10 parallel security checks** across HTTP headers, TLS/SSL, SPF/DMARC, CORS, cookies, exposed credentials, and CMS fingerprinting, returning a scored **JSON risk report**.
  - Implemented **SSRF protection** against private IPs, localhost, and cloud metadata endpoints, alongside per-IP rate limiting and accurate failure reporting for unreachable targets.
  - Published the API on **RapidAPI**, reaching **264+ users** through tiered subscriptions, and built a public web demo enabling browser-based scans without an API key.

Skills

Languages: Python, C++, C, SQL, JavaScript, TypeScript
Backend & APIs: Django, Flask, Node.js, Express.js, REST APIs, SSE, JWT Authentication
Databases: PostgreSQL, MongoDB, MySQL, Redis
Frontend & Tools: React.js, HTML/CSS, Postman, Git/GitHub, Linux
Cloud, AI & Security: AWS, Render, Vercel, Cloudflare R2, Scikit-learn, OCR, SSRF Protection, Rate Limiting, DNS/TLS

Achievements

- **Winner, Hackathon** | E-Summit 2026, IIIT NR — Mar 2026
- **Winner, Case Study Competition** | Xcelarate 2026, IIIT NR — Feb 2026
